- 1 User experience with alignment of real and virtual objects in a stereoscopic augmented reality interface 95%

Ming Hou

Proceedings of the 2001 conference of the Centre for Advanced Studies on Collaborative research November 2001

This paper reports two virtual pointer alignment experiments carried out using a stereoscopic augmented reality interface. The purpose was to evaluate users' sensitivity to surface texture, target position at designated probe points on a cylinder real object surface, virtual pointer form and binocular disparity. The results confirmed the main findings from a previous study: that both surface texture and target position have significant influences. Subjective evaluation of virtual pointer form re ...

- 2 Resolving occlusion in augmented reality 85%

Matthias M. Wloka , Brian G. Anderson

Proceedings of the 1995 symposium on Interactive 3D graphics April 1995

Current state-of-the-art augmented reality systems simply overlay computer-generated visuals on the real-world imagery, for example via video or optical see-through displays. However, overlays are not effective when displaying data in three dimensions, since occlusion between the real and computer-generated objects is not addressed. We present a video see-through augmented reality system capable of resolving occlusion between real and computer-generated objects. The heart of our s ...

- 3 Illuminating light: an optical design tool with a luminous-tangible interface 84%

John Underkoffler , Hiroshi Ishii

Proceedings of the SIGCHI conference on Human factors in computing systems January 1998
